

According to my Diploma, I'm a economist. I've been working credit risk for over 10 years. It helped me to develop communication skills, attention to detail, ability to analyze data sets, manage software services. However, the world, as well as technologies, is changing really fast and I also want to improve myself.

I'd like to work in a good IT company in a position of QA/QC engineer. I believe I can do it, because in my previous job I dealt with identifying and correcting mistakes, writing some documentation and reports, and I had to use my organizing skills. I'm sure the job is interesting and promising. It inspires to know that you can be a part of creating something useful and awesome.

WORK EXPERIENCE

Risk manager
Flexible Financial Solutions, LLC
Dec. 2018 – Dec. 2020
Region Kyiv, Ukraine

Head of credit analysis
Companion Finance, LLC
Dec. 2014 – Now. 2018
Region Kyiv, Ukraine

Credit Decision Verification Center
VTB Bank, PJSC
Jul. 2012 – Apr. 2014
Region Kyiv, Ukraine

As far as I am applying for the position of a trainee/junior, I have no commercial experience directly to the IT company.

But in my previous job, I worked as a project manager (product owner) in the big start-up online credit project. I was in charge of the task-setting, priority and urgency of the task, the timing and the correctness work of programme support.

I have practical and successful experience of testing and starting a large project, writing test-cases, and constantly working on creating, testing and starting new versions of the program.
